Why is mobile energy storage important? Therefore, enhancing the safe and stable operation capability of the power system is an urgent problem that needs to be solved. Mobile energy storage can improve system flexibility, stability, and regional connectivity, and has the potential to serve as a supplement or even substitute for fixed energy storage in the future. Is mobile energy storage a viable alternative to fixed energy storage? Mobile energy storage can improve system flexibility, stability, and regional connectivity, and has the potential to serve as a supplement or even substitute for fixed energy storage in the future. However, there are few studies that comprehensively evaluate the operational performance and economy of fixed and mobile energy storage systems. What is the economics of mobile energy storage? Under the medium renewable energy permeability (such as 44% and 58%), the economics of mobile energy storage is comparable to that of fixed energy storage, which is reduced to 2.0 CNY/kWh and 1.4 CNY/kWh. Can a fixed and mobile energy storage system improve system economics? Tech-economic performance of fixed and mobile energy storage system is compared. The proposed method can improve system economics and renewable shares. With the large-scale integration of renewable energy and changes in load characteristics, the power system is facing challenges of volatility and instability. What is the total system cost of mobile energy storage? The total system cost of mobile energy storage is the same as that of fixed energy storage, including investment cost, operating cost, and recovery cost. Unlike mobile energy storage, which incurs transportation costs during energy transportation, fixed energy storage incurs line transportation costs during energy transportation. What is large-scale mobile energy storage technology? Large-scale mobile energy storage technology is considered as a potential option to solve the above problems due to the advantages of high energy density, fast response, convenient installation, and the possibility to build anywhere in the distribution networks .
