Power Edison was founded in by industry veterans with the goal of addressing the need for utility-scale, mobile energy storage by giving utilities the ability to move energy to where it is needed. Mobility can be a key differentiator for an energy storage solution. What makes a good energy storage solution? Mobility can be a key differentiator for an energy storage solution. For example, mobile storage is often the preferred solution for utility operators to meet rising power demands. Battery energy storage is also used by operators to supplement grid power for up to three years before committing to fixed infrastructure investments. What are the advantages of mobile energy storage technologies? Compared with traditional energy storage technologies, mobile energy storage technologies have the merits of low cost and high energy conversion efficiency, can be flexibly located, and cover a large range from miniature to large systems and from high to high power density, although most of them still face challenges or technical bottlenecks. Why is mobile energy storage a stranded asset? Stationary storage lacks flexibility, suffers from low utilization and from the risk of becoming a stranded asset. Power Edison addressed these issues by developing mobile energy storage platforms: TerraCharge(TM) and AquaCharge(TM) for mobile land-based and water-based mobile energy storage respectively. What are the different types of mobile energy storage technologies?
