

What does an energy storage engineer do?The ideal candidate will have a background in electrical engineering with a focus on energy storage systems. Responsibilities include designing, developing, and testing energy storage technologies. Energy Storage Engineer will work on improving energy efficiency and developing new energy storage systems, including batteries and thermal storage. Do energy storage products need periodic maintenance?The requirements for periodic maintenance for energy storage products should be identified by the OEM (IEEE). In settings where predictive analytics maintenance is economical, guidance should also be available from the manufacturer that identifies methodologies for assessing when a product may be approaching a failure mode. How do I get a job in energy storage?You should look for a degree in a relevant field and previous work experience in energy storage or related field. Specific experiences with battery technologies, power systems, or renewable energy systems are a plus. Proficiency in using design and simulation software tools should also be highlighted. What should NREL consider when testing energy storage systems?Photo by Owen Roberts, NREL Considerations for energy storage system testing include the following. If cost-justified by a large purchase, consider qualification testing of battery systems. Include test conditions in specifications for battery O& M diagnostics and testing. How do I become an energy storage engineer?In addition to formal education, hands-on experience, such as internships or cooperative engineering programs, can provide practical skills and knowledge in energy storage systems. Some positions may require Energy Storage Engineers to hold a Professional Engineer (PE) license, especially for senior or leadership roles. How much does an energy storage engineer make?Continued learning is essential in this field due to the rapid advancement of energy storage technologies. Therefore, many engineers pursue additional training and certification programs to keep up with the latest trends and advancements in energy storage systems. The average salary for an Energy Storage Engineer is around \$96,546 (USD) per year.
