

What is the difference between a portable power station and a solar generator?The primary distinction lies in how they handle energy. Portable power stations (PPS) store energy, while solar generators generate energy by converting sunlight through solar panels. However, if you pair a portable power station with solar panels, you essentially create a solar generator setup. Are solar panels better than a portable power station?Due to the necessary addition of solar panels, generators tend to be a little heavier and larger than PPS systems. However, portability varies significantly. A smaller model with solar panels will still be lighter than a more heavy-duty portable power station. What is a portable power station?A portable power station functions much like an oversized power bank--the kind you might use to recharge your phone in a pinch. However, unlike standard power banks, a PPS is capable of powering much more than just small devices; it can supply energy to larger home appliances such as refrigerators. Charging a PPS is simple.
