What is off-grid energy storage? While mentions of large tied-grid energy storage technologies will be made, this chapter focuses on off-grid storage systems in the perspective of rural and island electrification, which means in the context of providing energy services in remote areas. The electrical load of power systems varies significantly with both location and time. Is energy storage a viable option for power grid management?

1. Introduction: the challenges of energy storage

Energy storage is one of the most promising options in the management of future power grids, as it can support the discharge periods for stand-alone applications such as solar photovoltaics (PV) and wind turbines. Which energy storage technologies are most commonly used in off-grid installations? If nonelectrical energy storage systems--such as water tank for a pumping system or flywheels or hydrogen storage in specific locations and contexts--are sometimes a relevant solution, electrochemical storage technologies are the most common for off-grid installations [35].

What is an energy storage system? The energy storage system provides a back-up energy source in case of grid failure or intentional "islanding." (In intentional islanding, the generator disconnects from the grid, and forces the distributed generator to power the local circuit. Is energy storage a good option for a microgrid? Energy storage is one of the most promising options in the management of future power grids, as it can support the discharge periods for stand-alone applications such as solar photovoltaics (PV) and wind turbines. The main key to a successful mini- and microgrid is a reliable energy storage solution, including but not limited to batteries .

What types of batteries are available in off-grid projects? Electrochemical energy storage is indeed the most common storage option in off-grid projects, although a few hybrid storage systems have emerged during the past few years. Key parameters used to compare the types of batteries on the market are described below ([2, 25, 26]):
