Energy storage is the capture of energy produced at one time for use at a later time to reduce imbalances between energy demand and energy production. A device that stores energy is generally called an accumulator or battery. Energy comes in multiple forms including radiation, chemical, gravitational potential, Storage capacity is the amount of energy extracted from an energy storage device or system; usually measured in or and their multiples, it may be given in number of hours of electricity production at power plant ; GermanyIn , the German government allocated EUR200M (approximately US\$270M) for research, and another EUR50M to subsidize battery storage in residential rooftop solar panels, according to a representative of the German Energy Energy Storage One way to store energy is to use a battery, but what other ways can we store energy?
