Is DOE addressing the energy storage industry's challenges? EAC conducted a months-long review of obstacles and challenges facing the energy storage industry to determine areas of pressure and pain, and to assess whether DOE was addressing these obstacles and challenges in its funding, policy, initiatives, and other efforts. What role does DOE play in promoting energy storage standards? DOE should play a leadership role in promoting the development of standards for the entire spectrum of the energy storage industry, including the compatibility of communications and controls, regulatory consistency, siting and safety considerations, obsolescence, disposal and recycling, reliability, and cyber and physical security. Should DOE conduct a macro-energy storage analysis? DOE should conduct a macro-energy storage analysis to determine the power and duration of energy storage needed and where it is needed. This should be compared with the projected availability to assess whether it satisfies the needs and evaluates the cost associated with the needs. Do energy storage products need periodic maintenance? The requirements for periodic maintenance for energy storage products should be identified by the OEM (IEEE). In settings where predictive analytics maintenance is economical, guidance should also be available from the manufacturer that identifies methodologies for assessing when a product may be approaching a failure mode. How can critical services benefit from energy storage policy improvements? Critical services can benefit from policy improvements that enable greater adoption of energy storage, including the use of energy storage as an alternative to backup diesel generators and regulatory cost models that allow grid storage to be repurposed for emergency services. Should long-duration storage be considered for energy-intensive facilities? Long-duration storage is particularly valuable to energy-intensive facilities and incentives and pilot projects for long-duration storage should be considered for the facilities. EAC received additional comments from industry stakeholders. Selected comments are included below: This report is available at no cost from the National Renewable Energy Laboratory (NREL) at [.nrel.gov/publications](https://www.nrel.gov/publications).
